

Citrus pulp (pellets)

- Good energy source
- Low in protein
- High fiber content
- Very digestible
- Pelleted to ease transportation
- Palatability problems with calves
- Be cautious for overheating-will turn dark color (black)

On average:
90% dry matter
81% TDN
7% CP
1.8% calcium
0.15% phosphorous

Feeding Considerations

- Should be less than 1/3 of diet for growing beef cattle
