

# Corn gluten feed (loose or pelleted)

- Good protein and energy value
- Can have high levels of sulfur – mixing with other feeds can offset this
- Watch for dark color in large loads – can indicate overheating and decrease feed value

On average:  
90% dry matter  
83% TDN  
21% CP  
0.08% calcium  
0.54% phosphorous

## Feeding Considerations

- Feed at no more than 50% of daily dry matter intake
