

Our Mission:

The goal of Alabama Integrated Pest Management (IPM) Information Center is to support the communications network of the Southern Region IPM Center (SRIPMC) by promoting IPM knowledge and adoption in Alabama. The Alabama IPM Program focuses on implementation of IPM practices in traditional and non-traditional agriculture.

Program Objectives:

- Enhance IPM communication by providing important and timely IPM information to stakeholders in Alabama through appropriate media.
- Provide planning, coordination and oversight for SRIPMC projects conducted in Alabama, including crop profiles, pest management strategic plans (PMSPs), special projects, and for stakeholder-identified priorities in the state.
- Identify and prioritize needs and opportunities for IPM research and education in the state.
- Foster interdisciplinary collaboration among various IPM specialists (i.e. entomologists, plant pathologists, weed scientists), as well as facilitate partnerships among researchers, extension agents/IPM educators, and other IPM stakeholders.
