

# How To Change Power Settings in Windows XP

Changing the power settings of Windows XP will allow uninterrupted remote access to a desktop or laptop no matter the time of day as well as allow updates to be installed during off-peak hours.

- 1) Right-click on the desktop and select “Properties”

- 2) Select the “Screen Saver” tab at the top

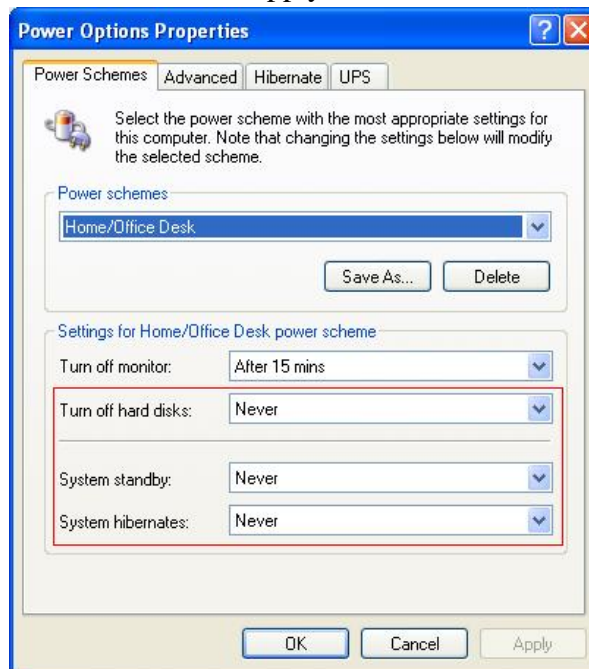

3) Select the “Power” button near the bottom

4) Desktop machines follow instructions under part A and laptop machines follow the steps under part B.

A. Change “Turn off hard disks”, “System standby”, and “System hibernates” to “Never”, then click apply.

- B. Under “Plugged In” change the options of “Turn off hard disks”, “System standby”, and “System Hibernates” to “Never”. Click “Apply” at the bottom.
