

## How to Dim Text after an Animation in a PowerPoint Presentation

The text must already have an animation applied to it before you can complete this process.

1. If the **Custom Animation** task pane is not displayed, on the **Slide Show** menu, click **Animation**.
2. In the **Custom Animation** *task pane*, click the item you want in the *Custom Animation* list, click the down arrow next to the item, and then select **Effect Options**.
3. Click the **Effect** tab. Under **Enhancements**, click the down arrow next to **After Animation**. Click a color that offers the dimming effect you want and **OK**.
4. Click the **Slide Show** button to view the dimming effect.

This option is not available for **Exit** effects.
