- Weed Control
- Watering Your Lawn
- Update on the Lawn Industry's Product Development

****Door Prize Drawing****

Key Points on Phosphorus:

- *Economics – Phosphorus is expensive – don't use it if you don't need it*
- *Plant health – if over-applied, phosphorus hurts plants*
- *Watershed stewardship – Phosphorus is the primary pollutant in the Saugahatchee Creek Watershed; it is fouling the creek and parts of Yates Lake, therefore watershed residents should minimize its use*
