

IPM-1295

General Pesticide Information

Alabama Pest Management Handbook for 2018

FEDERAL RESTRICTED USE PESTICIDES

Sonja B. Thomas, Extension Specialist - Pesticide Safety Education Program

The EPA has updated its list of restricted use pesticides. The current updated copy can be found at the EPA Restricted Use Pesticide website: <http://epa.gov/opprd001/rup>.

ALABAMA 24(C) LABELS

A 24(C) registration is a federal registration that has been granted to the state of Alabama for a special local need. This registration is valid only in the state of Alabama; it is in effect through December 2018.

Alabama Registration Number	Product Name	Use	Company Name
<u>AL-850008</u>	Aquathol K Aquatic Herbicide	Broad range of Aquatic Weeds in Irrigation/ drainage canals, ponds, lakes.	United Phosphorus Inc
AL-100001	Arsenal Powerline Herbicide	For control on cogongrass in areas that may be grazed or cut for hay.	BASF
AL-120006	Avipel Hopper Box (Dry)	Corn seed treatment for the protection of field and sweet corn seed against consumption by black birds.	Arkion Life Sciences, LLC
AL-120005	Avipel Liquid Seed	For protection of field and sweet corn seed against consumption by black birds.	Arkion Life Sciences, LLC
AL-080001	Brigade 2 EC Insecticide/ Miticide	For agricultural or commercial use only, conifer seed orchards; pest: cone worm, seed bugs, and seed worms.	FMC Corp. Agricultural Products Group
AL-040001	Curfew	SLN only; no base product registration; crop: turf pest: nematodes and mole crickets.	Dow Agrosciences, LLC
AL-870002	Dimilin 25W	Crop: Christmas trees; pest: Nantucket pine tipmoth.	Macdermid Agricultural Solutions, Inc
AL-930004	Dimilin 25W	Crop: aquatic sites; pests: mosquitoes and midges.	Macdermid Agricultural Solutions, Inc
AL-130003	Direx 4L	Controls algae in commercial catfish farm production.	Adama
AL-100003	Dual Magnum	For weed control in sesame - EPA SLN NO. A-100003	Syngenta Crop Protection, LLC
<u>AL-170002</u>	Engenia Herbicide	Use on Dicamba-Tolerant Cotton & Soybean	<u>BASF</u>
<u>AL-170003</u>	Enlist Duo	Training/Wind Speed Reduction on Cotton and Soybean	DOW
<u>AL-170004</u>	Fexapan	Training/Wind Speed Reduction on Cotton and Soybean	E I Dupont De Nemours & Co
<u>AL-170005</u>	GF-3335	Training/Wind Speed Reduction on Cotton and Soybean	DOW
AL-120003	Gramoxone SL 2.0	Use on peanuts.	Syngenta Crop Protection, LLC
AL-130002	Karmex DF	Controls algae in commercial catfish production.	Adama
AL-140001	Micora	Crop: greenhouse basil; pest: downy mildew.	Syngenta Crop Protection, LLC
AL-120004	Milestone	Control of wildling pines and certain hardwood trees in forest site preparation areas.	Dow Agrosciences, LLC

Alabama Registration Number	Product Name	Use	Company Name
AL-120007	Milestone	For control or suppression of blackberry (briars), vines, and susceptible broadleaf weeds in newly planted longleaf pine plantations - SLN.	Dow Agrosiences, LLC
<u>AL-130001</u>	Natrix 24-C	Non-native Apple Snails in Potable Water	Sepro Corp
AL-060006	Permethrin	Crop: conifer nurseries; pest: regeneration weevils	Loveland Products, Inc.
AL-120002	Profume	Fumigation of nonedible commodities and use of quarantine/regulatory treatment schedules.	Douglas Products & Packaging Co.
AL-030003	Reflex Herbicide	Pine seedlings; pest: pre-emergent	Syngenta Crop Protection, LLC
AL-170006	Strong Arm	Tropical Spiderwort on Peanuts	DOW
AL-110003	Subdues Maxx	For use in greenhouses for control of downy mildew on basil transplants	Syngenta Crop Protection, LLC
AL-160001	Tribune	Crop: aquatic areas; pest: hyrilla.	Syngenta Crop Protection, LLC
AL-100002	Valor SX Herbicide	[Expires Dec. 31, 2015]/Preplant burndown residual control of resistant palmer amaranth and other weeds in cotton.	Valent USA Corp
<u>AL-170001</u>	<u>Xtendi Max with Vapor Grip</u>	<u>Training/Wind Speed Reduction on Cotton and Soybean</u>	<u>Monsanto</u>
AL-070005	Zoro Miticide/ Insecticide	Crop: cotton; pest: spider mites.	Cheminova, Inc.

MAINTAINING WATER QUALITY

Sonja B. Thomas, Coordinator - Pesticide Safety Education Program

Clean water is of great concern for all Americans. Almost all potable water supplies come from surface or ground water. Surface water is derived from above-ground sources such as lakes, streams, ponds, or other impounded bodies. Ground water is found in zones beneath the earth's surface, which are called aquifers. Aquifers are formations of rock, sand, or gravel in which all pore spaces are filled with water. Aquifers serve as the source of fresh water for wells and springs. Water originates as rain or melted snow, which either accumulates on the soil surface or percolates through the soil to the water table and into ground water.

Many human activities can have a detrimental effect on water quality. Contamination from industrial wastes, petroleum products, fertilizers, manures, and municipal sewage and septic tanks all affect the quality of our surface and ground water. Actions have been taken on a national scale to eliminate or to minimize the effects of these sources of possible contamination.

Agricultural pesticides may also contaminate aquifers or surface water sources. Pesticides enter surface and ground water because of the actions of the landowner. Pesticides can enter water directly through accidental spills, back siphoning, intentional excessive pesticide application, improper application, improper disposal of rinsates, improper container disposal, and through poorly constructed or maintained wells. These situations are all avoidable and can be prevented with greater attention to proper management practices and through upgrading application equipment.

Pesticides can enter water indirectly through normal

leaching in the soil after application or through surface runoff (or surface-loss). Contamination due to surface-loss from agricultural fields can be reduced in part by modifying farming practices. Contour farming, no-till farming, and strip farming can reduce the movement and flow of water, thereby minimizing any soil erosion from sloped fields. In some cases, selecting the appropriate pesticide can reduce the potential for leaching and for surface-loss as well.

Each agricultural chemical or pesticide used today has different water solubility and other chemical characteristics that affect its behavior in and on soils. The solubility and behavior of a pesticide in the soil is dependent in part on the soil texture, soil type (morphology), and organic-matter content. These factors all affect the degree of soil absorption of a pesticide.

Soils with a high organic-matter content or with considerable amounts of clay in their structure tend to strongly adsorb pesticides, thus reducing leaching. However, coarse-textured sandy soils low in organic matter have low adsorption, which tends to permit downward leaching of pesticides. A knowledge of your particular soil type and soil texture will help in selecting pesticides which have limited potential for surface-loss or leaching.

In places where soils are very sandy or gravelly with little organic matter, a producer should select a pesticide that has only small or medium leaching potential. Use of a chemical with a large leaching potential in this situation could lead to contamination of ground water. In situations where fields have considerable slope or in areas where soil is permanently saturated with water, it is advisable to use a pesticide that has a small to medium potential for surface-loss.

In areas where ground water is quite shallow, there is a good possibility that pesticides can enter the ground water through leaching. In areas of limestone composition, it is possible that pesticides can enter ground water through developing sinkholes. In these situations, selection of pesticides used in agricultural production is critical to prevent possible contamination of surface and ground waters.

More than 65,000 pesticides are registered in the United States. Many of these have been identified in our nation's lakes and streams. Identifying all of the potential pesticides and the harm they may cause to our waterways is impossible in this guide. However, several agencies and universities involved in pesticide regulation and water quality can offer great resources to help you keep our waters safe. Below is a list of resources to help you learn more about the pesticides you use and ways to protect Alabama's water resources. With these links you can learn more about your pesticide and how they will affect our environment.

- [US. Environmental Protection agency](http://www.epa.gov) (www.epa.gov)
- [National Pesticide Information center](http://www.npic.orst.edu) (Find specific information about your pesticide's active ingredient.) (www.npic.orst.edu)
- [Extension Toxicology Network](http://extoxnet.orst.edu) (extoxnet.orst.edu)
- [eXtension Pesticide Environmental Stewardship](https://www.extension.org/pesticidestewardship) (https://www.extension.org/pesticidestewardship)
- [Alabama Department of Agriculture and Industries](http://agi.alabama.gov) (http://agi.alabama.gov)

For detailed and specific product information, it is highly suggested that you view your pesticide label and follow all instructions related to drift and runoff.

FOR MORE INFORMATION on pesticides, pesticide safety, or submitting samples for analysis, see the following publications in the IPM series:

IPM 1293, "Safety." Safety contact information; worker protection standards; the safe use, handling, and storage of pesticides

IPM 1294, "Submitting Samples." Procedures for submitting samples for diagnosis, analysis, and identification

IPM 1317, "Appendix." Pesticide guidelines for agronomic crops, including preharvest intervals; rain-free requirements; grazing restrictions; crop rotation guidelines; and the names, classifications, and toxicities of pesticides.

2018 IPM-1295

For more information, contact your county Extension office. Visit www.aces.edu/counties or look in your telephone directory under your county's name to find contact information.

Use pesticides **only** according to the directions on the label. Follow all directions, precautions, and restrictions that are listed. Do not use pesticides on plants that are not listed on the label

The pesticide rates in this publication are recommended **only** if they are registered with the Environmental Protection Agency or the Alabama Department of Agriculture and Industries. If a registration is changed or canceled, the rate listed here is no longer recommended. Before you apply **any** pesticide, check with your county Extension agent for the latest information.

Trade names are used **only** to give specific information. The Alabama Cooperative Extension System does not endorse or guarantee any product and does not recommend one product instead of another that might be similar.

Alabama Cooperative Extension System (Alabama A&M University and Auburn University) is committed to affirmative action, equal opportunity and the diversity of its workforce. Educational programs serve all people regardless of race, color, national origin, age, disability, sex, gender identity, marital status, family/parental status, religion, sexual orientation, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program.
