### INDEX NUMBERS FOR ALABAMA FARM REAL ESTATE VALUES

Walt Prevatt and John Adrian  
Extension Economists and Professors  
Auburn University

Appraisers and accountants frequently need to place a value on farm real estate during some prior time period for tax purposes. Attached is a list of index numbers that may be used to estimate Alabama Farm Real Estate Values in prior years. Index numbers from 1912 through 1986 were taken from various USDA publications. Beginning in 1987 USDA discontinued publishing the index numbers, but continued publication of dollar estimates of farm real estate values. The index numbers from 1987 to 2009 were calculated from these published farm real estate values.

The following two examples show how to use the index numbers to estimate farm real estate values.

1. Estimate the 1955 value of farm real estate that sold during 2007 for \$3,500 per acre.

1955 Index  
----- X 2007 value = estimated 1955 value  
2007 Index

15.5  
----- X \$3,500 per acre = \$130 per acre, estimated 1955 value  
416

2. Estimate the 1987 value of farm real estate that was purchased for \$500 per acre in 1969.

1987 Index  
----- X 1969 value = estimated 1987 value  
1969 Index

149  
----- X \$500 per acre = \$1,749 per acre, estimated 1987 value  
42.6

<sup>1</sup> Estimates were as of March 1, 1912-75; February 1, 1976-81; April 1, 1982-85; February 1, 1986; January 1, 1990-Present. Beginning in 1987, the index numbers were calculated from annual percentage changes of Farm Real Estate values reported in Agricultural Resources. Hence, the 2009 index number is equal to the percentage change in Farm Real Estate Values times the 2008 index number plus the 2008 index number.
