Benefits of COVID-19 Vaccine

COVID-19 vaccines are safe.

COVID-19 vaccines were made using science that has been around for many years.

COVID-19 shots are not a trial vaccine.

They have been tested to make sure they work and are safe.

COVID-19 Vaccines Work

COVID-19 vaccines do their job.

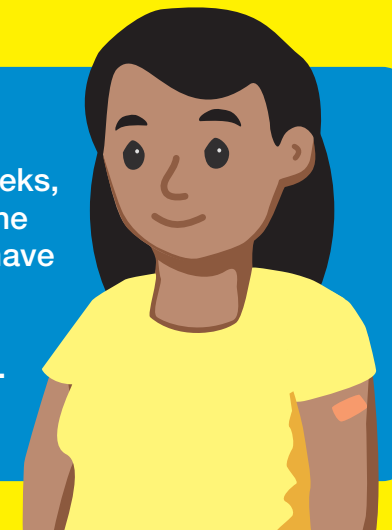

COVID-19 vaccines help keep you from getting very sick even if you get COVID-19.

Getting the COVID-19 vaccine will help protect the people around you.

After You Are Fully Vaccinated

- You are not fully safe until 2 weeks after a 2-dose series or 2 weeks after a single-dose vaccine.
- After these 2 weeks, you can start doing some of the things you did before COVID-19.
- Make sure to look for any new changes about COVID-19 to keep yourself safe.

During these 2 weeks, use all of the tools you have to protect yourself and others.

The COVID-19 Vaccine Is the Best Way to Protect Yourself

- You should still get vaccinated even if you have had COVID-19.
- After you had COVID-19, you need to wait a while before getting the COVID-19 shot.
- Your doctor will tell you how long to wait before getting the COVID-19 shot.
- Vaccines are the best way to protect yourself from COVID-19.
