

The Sweet Potato Challenge

Would you like to try your hand at growing sweet potatoes this summer? The 4-H Grows Sweet Potato Challenge provides youth with four to six plants and a project journal. Participants plant in late April to May and harvest in the fall. The goal is to produce as many sweet potatoes as possible and bring them to the county Extension office for a weigh-in at the end of the project in September or October. Contact your county's 4-H representative or visit our website at www.aces.edu/go/4HGrowsProgram to learn more about the Sweet Potato Challenge, other 4-H Grows projects, and how to register.

The **Sweet Potato Challenge** project fee is _____
