

Alabama 4-H Grows

4-H Pollinator Project

Bees and other pollinators need our help to survive. If you are interested in helping pollinators and enjoy gardening, this project is for you.

Youth participating in the **4-H Pollinator Project** will learn about pollinators and their importance to us. They will also learn about the environment as they design and plant a pollinator garden primarily using native plants. Once the garden is planted, youth will monitor and record the species and number of pollinators that visit their garden, sharing their findings with others. To learn more about this project and other 4-H gardening activities, visit our website at www.aces.edu/go/4HGrowsProgram or contact your county 4-H representative.

For more information, contact _____ at the _____ County Extension office at _____.
